Peripheral Artery Disease

Do I need a test for PAD?

Peripheral Artery Disease (PAD) is a common circulation problem in which arteries carrying blood to the legs are not functioning well or become narrowed or clogged due to a build-up of plaque.

PAD may cause leg discomfort with walking, poor healing of leg sores/ulcers, difficulty controlling blood pressure, or symptoms of stroke. Answers to these questions will determine if you are at risk for PAD and if a simple, non-invasive vascular exam will help us better assess your vascular health status.

Name: _____ Date of Birth: _____

Do you have foot, calf, buttock, hip or thigh discomfort (aching, fatigue, tingling, cramping or pain) when you walk which is relieved by rest? ☐ Yes ☐ No

Do you experience any pain at rest in your lower legs or feet? ☐ Yes ☐ No
